

Correction

Responding to a report, 'City of Glass cracks under Iran war's distant heat', published on Friday, GAIL Gas Ltd has clarified that there is no cut or shortage of natural gas. The company has said that the total volume of natural gas available for the glass industry in Firozabad and the foundry industry in Agra under the Unified Price Mechanism (UPM), as on date is about 1.265 million metric standard cubic meters per day (MMSCMD), even after the implementation of gas supply restrictions as per government notifications. However, only about 1.01 MMSCMD gas is being consumed by these customers, GAIL has said, adding that there is no restriction of gas supply over and above the 1.265 MMSCMD quantity, albeit at the applicable spot RLNG price for supplies above the allocated quantum.

The error is regretted.
